Interesting Data

Qinghua Feng

March 2023

1 The data is about Personal income tax

2 I need to know more about personal income tax rate, since the deadline for tax return is approaching

3 US tax system is complicated, it's helpful to know more about tax.

4 I don't have much experience for data parsing.

Using API to generate a data set

5   This data covers the daily closing stock prices for Apple Inc. (AAPL) for the past 30 days.

6   This type of data can be useful for technical analysis, such as identifying trends and patterns in the stock's price movements, and for fundamental analysis, such as assessing the company's financial health and growth prospects.

7   This data could be useful for future demonstrations or tutorials on how to work with financial data using APIs in Python or R.

8   There are many resources available online for working with financial data using APIs. Some popular resources include the Tiingo API documentation, the requests library documentation for Python, and the httr library documentation for R..
